

LITHO-BUBBLES[®] , hydrophobic

Description

LITHO-BUBBLES[®] H is a hydrophobic mineral granule, multi-cellular, open-celled foam granulate which has many different uses as lightweight filler.

Application

LITHO-BUBBLES[®] are preferentially used as lightweight filler in aqueous but also in solvent-containing and solvent-free systems such as paints and coatings, refractory and foundry products, mould making, grinding agents or construction chemical products. Sometimes customer wish a hydrophobic treatment for special use in cement base systems for building and construction.
