

## **LITHO-BUBBLES<sup>®</sup> , hydrophobic**

### **Description**

LITHO-BUBBLES<sup>®</sup> H is a hydrophobic mineral granule, multi-cellular, open-celled foam granulate which has many different uses as lightweight filler.

### **Application**

LITHO-BUBBLES<sup>®</sup> are preferentially used as lightweight filler in aqueous but also in solvent-containing and solvent-free systems such as paints and coatings, refractory and foundry products, mould making, grinding agents or construction chemical products. Sometimes customer wish a hydrophobic treatment for special use in cement base systems for building and construction.
